NASS Crashworthiness Data System (CDS)

1997 Code Book - Version 25May00

Note: This is an updated version of the original NHTSA release of the 1997 data. The new release has "corrected" CDC clock directions and new variables (V568-V569) representing the Primary and Secondary CDC clock directions in degrees. One case was also deleted from the original 1997 file by NHTSA.

Introduction

This code book documents data sets describing a sample of motor vehicle accidents that occurred in the USA during calendar year 1997. These sets represent the NASS Crashworthiness Data System distribution file dated May 25, 2000. The data sets were generated by the Transportation Data Center at the University of Michigan's Transportation Research Institute from data collected by the National Center for Statistics and Analysis (NCSA) of the National Highway Traffic Safety Administration (NHTSA). The cooperation of NHTSA is gratefully acknowledged.

The 1988-1997 CDS data represents a statistical sample of motor-vehicle accidents whose collection methodology was designed to assist in studies directed toward a determination of vehicle crashworthiness.

Primary program goals include:

- 1) A focus on accidents involving automobiles and automobile derivatives, light trucks (GVWR < 4,536 kgs (10,000 pounds)), and vans;
- 2) Special consideration for late model vehicles through the inclusion of vehicles with the most recent five model years;
- 3) The selection of accidents with more serious injuries.
- 4) Cases are limited to those with a towed vehicle or automatic occupant protection.

The data are a sample of the 1997 motor vehicle accidents for which candidate accidents were chosen with varying probabilities

according to a scheme detailed in the Coding and Editing Manual.¹ The coding manual provides detailed information on the interpretation and coding protocol for each information element.

The relational data set supplied by NCSA contains eight separate relations describing each accident. They are:

- 1) Accident - One record for each accident describing general accident parameters;
- 2) Accident Event Sequence - One record for each event in the accident describing vehicle/vehicle or vehicle/object contacts in sequence;
- 3) General Vehicle - One record for each vehicle in the accident describing general vehicle parameters;
- 4) Exterior Vehicle Damage - One record for selected vehicles describing exterior damage in terms of CDC's and CRASH parameters;
- 5) Interior Vehicle Damage A - One record for selected vehicles describing door and window damage;
- 6) Interior Vehicle Damage B - One record for selected vehicles describing intrusion and other interior damage;
- 7) Occupant Assessment - One record for every vehicle occupant describing general occupant parameters;
- 8) Occupant Injury - One record for every injured occupant describing injury in terms of OIC and AIS scales.

A large number of flat files can obviously be generated from this wealth of complex relations. Users with a need for significant, generally applicable joins not represented by the system data sets are encouraged to contact the Data Center. The traditional Accident, Vehicle, Occupant, and Injury data sets were generated by relational joins of the corresponding record types with some extensions. The accident segment of the data sets was generated by a join of the Accident record with the

¹ National Center for Statistics and Analysis, National Accident Sampling System, 1997 Crashworthiness Data System, Data Collection, Coding, and Editing Manual, January 1997.

first Event record for the case. The vehicle portion of the data sets was itself generated by a join of the General Vehicle, Exterior Vehicle Damage, Interior Damage A, and Interior Damage B records. Since a given vehicle is not, in general, represented by all three damage relations, filler records are substituted whenever one of the damage records is missing. These filler records are indicated by a value of "0" for the corresponding "Record Number" variable (i.e., variable 503, 603, or 703).

The characteristics of the five system data sets that have been developed are presented in the table below.

Characteristics of the NASS 1997 CDS Data Sets

DATA SET	KEY	Freq	VARIABLES
Accident	CDS97ACC	4,376	101-124,201-211
Injury	CDS97INJ	29,234	101-124,201-211,301-408, 501-569,601-648,701-756, 801-878,901-921
Occupant	CDS97OCC	10,337	101-124,201-211,301-408, 501-569,601-648,701-756, 801-878
Two-vehicle acc	CDS97TVA	2,480	101-124,201-211,301-408, 801-878,1301-1408, 1801-1878
Vehicle	CDS97VEH	7,740	101-124,201-211,301-408, 501-569,601-648,701-756

The code book itself is divided into eight sections that document the accident, event, vehicle, damage, occupant, and injury records, respectively. The univariate frequencies and percentages displayed in each section are taken from the corresponding data set: accident and event frequencies from CDS97ACC, vehicle and vehicle damage frequencies from CDS97VEH, occupant frequencies from CDS97OCC, and injury frequencies from CDS97INJ.

The two-vehicle accident data set contains one accident record for every accident involving two vehicles. This record documents accident and first event information as well as vehicle and occupant (for the driver) information for each of the two involved vehicles. In order to avoid a large amount of duplication, the two-vehicle accident file is not documented directly in this code book. Univariate frequencies are consequently not available. Variable numbers for the data set are as follows:

V101 - V124 - Accident
V201 - V211 - Event #1
V301 - V408 - Vehicle #1
V801 - V878 - Occupant information for Driver #1
V1301 - V1408 - Vehicle #2
V1801 - V1878 - Occupant information for Driver #2

The code book may be used for the definition of variables V100 through V878. Variables V1301 - V1408 have the same definition as V301 - V408, and variables V1801 - V1878 have the same definition as V801 - V878.

While every effort has been made to provide accurate, reliable data, inconsistencies may arise from the source data or from the reformatting procedures used. Consequently, the Data Center cannot guarantee the accuracy of the data but will try to correct any discrepancies that are found. Please notify the Center of any errors or data inconsistencies that are uncovered, as well as any suggestions or comments that you may have concerning the code book by calling (734) 763-3230 or by emailing TDC-UMTRI@umich.edu.

APPENDIX A

Code Values for Variable 353

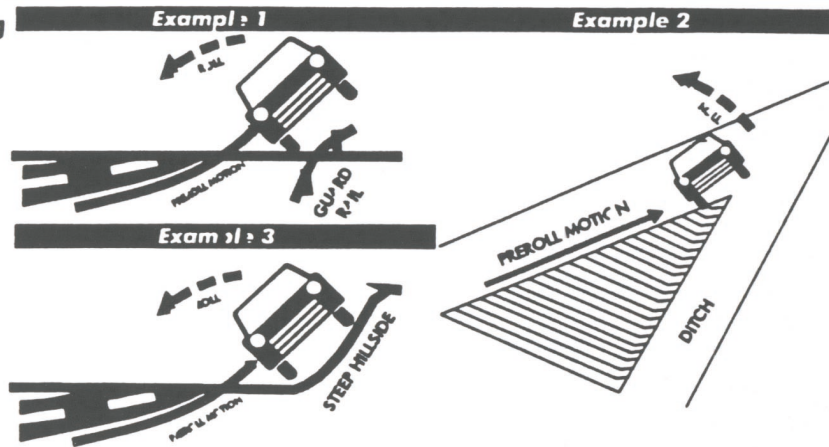

"Rollover Initiation Type"

CODING GUIDE FOR ROLLOVER INITIATION TYPES

01 Trip-Over: Vehicle lateral motion is resisted by opposing force, inducing roll moment.

02 Flip-Over: Forward-moving vehicle is vigorously rotated about its longitudinal axis by ramp-like object such as a guardrail taper or ditch back slope.

03 Turn Over: Centrifugal forces from a sharply turning or rotating vehicle produce a rollover moment when resisted by surface friction.

04 Climb-Over: Vehicle climbs up and over fixed object such as barrier.

05 Fall-Over: Vehicle is tipped by slope so that its center of gravity is outboard of its wheels.

06 Bounce-Over: Any case where vehicle rebounds off fixed object (such as a guardrail), overturns as a consequence.
